RESEARCH INTERESTS

My research focus is 3D computer vision and its application in autonomous driving, robotics, and XR. I'm especially interested in developing generalizable methods for 3D scene reconstruction, including monocular depth estimation, sensor fusion, and multi-view scene reconstruction and rendering. Since real-world data with high-quality 3D ground-truth is expensive and laborious to collect, I'm also interested in creating diverse and photo-realistic synthetic data using procedural generation.
